Boris Gerát

boris.gerat@fsv.cuni.cz

Education	MA in Economic Research, CERGE-EI
Past work	Inflation targeting of the ECB and the Fed Neural networks and business cycle turning points MA thesis: risk channel of monetary policy (Bayesian VAR)
Current work	Persistence of stock characteristics and expected returns
Interests	Machine/Deep learning, Asset pricing, Frequency/Factor decomposition

How the seminars work

In class

Exercise notebook together

After class

I upload the solution

Feedback

You fill in a short questionnaire

Shaping some sessions together

Some classes can follow your questions:

- IDEs and tools
- Which programming language where
- Your place in the world of AI

The first questionnaire asks about these, as a preliminary survey of your interests.
